

TENNIS COURTS
ENSURING SAFETY AND PERFORMANCE

MAINTENANCE, INSTALLATION AND REFURBISHMENT

www.sportsmaintenance.com

What we do

Sports Maintenance Services
have been looking after tennis
courts for over 15 years.

We work throughout the UK and have a wealth of experience in the maintenance and refurbishment to both hard and synthetic tennis court systems.

We offer professional maintenance incorporating independent UKAS slip testing – vital to ensure safe play characteristics and consistent play qualities.

We can advise on the most responsible recycling methods available and we can also recommend and install alternative replacement surfaces.

Our experience enables us to give guidance on how much life is left in your court and we offer solutions regarding the disposal of old playing surfaces.

Hard Surfaces

Moss and algae are often found on hard court surfaces. This can look unsightly and can create slippery areas, which may lead to accidents. It can also compromise the structural integrity of the tarmac surface.

Sports Maintenance Services can eliminate this problem through chemical treatments and industrial pressure cleaning. The result is a more consistent and safer playing surface.

Resurfacing and Retexturing

Hard surfaces should be re-textured every 4-5 years.

We offer a variety of colour combinations all of which benefit the court in terms of aesthetics, surface performance and extended life of the court. Our coatings greatly improve grip, making the surface safer for players. We only use SAPCA* approved sports premium textured paint.

Grey Green Courts Refurbishment

Grey Green are bitumen or resin bound court surfaces with a top dressing of shale/grit which is evenly spread and partly adhered to the surface.

A traditional court surface, Grey Green courts give a medium fast game with low ball bounce.

As grit migrates over time, they will require additional top dressing. After a gentle jet wash and chemical treatment Sports Maintenance Services would refresh the grit levels and apply additional resin if needed. Repairs would also be carried out if required.

Grey Green after refurbishment

Repairs

We are able to perform surface repairs to a variety of common hard surface problems:-

- Infra-ray heat treatments for cracks and small holes
- Compression of root encroachment
- Disk cutting and re-levelling of subsidence
- Patch repairs

Rejuvenation to synthetics

If your courts are showing signs of poor drainage then rejuvenation or partial rejuvenation may be required. The signs are as follows:

1. The appearance of numerous and persistent puddles after light rainfall.
2. Slimy residues appearing on the playing surface after surface waters have subsided.
3. Infill waste spreading to the outside of the playing surface after heavy rainfall.
4. The surface becoming dangerously slippery, especially in wet conditions.

All of the above impacts upon safe play characteristics. Furthermore, as the surface will only be playable on fair weather days, the interruption to scheduled games can have a financial impact and cause player dissatisfaction.

Our rejuvenation process uses specialist machinery to release compacted infill, remove contaminated infill and to then dress and level new infill to appropriate pile height levels. Once a playing surface has been rejuvenated we will offer a professional maintenance programme to ensure that the all weather capabilities of the surface are maintained.

Porous Kushion Kourt (PKK)

PKK is a cushioned acrylic matting system. It offers an all weather surface that is totally free draining. Ideal for laying over an existing hard porous court, PKK provides a superior surface and a cost effective refurbishment.

The even textured surface offers excellent play characteristics; it is responsive to spin and provides a true and consistent bounce. Classed as ITF category 4 medium – fast pace play, the PKK is used in many tennis clubs and is noted for being kind on players' joints. The slip resistant texture gives excellent foot grip.

A great option for tennis clubs and private clients, the PKK system is quick to install over an existing porous hard court. Easy to build and easy to refurbish, PKK offers low maintenance and has a minimum 10 year life expectancy.

Sports Maintenance Services are the UK's official installer of PKK courts. Established for over 15 years, we have a wealth of experience in both the fitting and maintenance of PKK Courts.

EASY TO USE	EASY TO PLAY	EASY ON THE JOINTS	EASY TO MAINTAIN	EASY ON THE POCKET	EASY BUILD / REFURBISH
Play straight after rain. No puddles. No drying aids. Use all year round.	Authentic acrylic play. True acrylic bounce, spin and pace.	Truly shock absorbing, equivalent to 12 layers of cushioning.	Minimal annual maintenance.	Capital costs reduced. Running costs minimal. No downtime.	Faster installation time. Simple conversion of existing courts.

Match Point Sand Dressed

Providing your existing hard court is in reasonable condition and level, you can have a quality mono fibre sand filled or sand dressed carpet of your choice professionally fitted over the older hard surface.

- Carpet overlays are cushioned, safe to play on and give a medium paced game
- Restores consistent play characteristics
- Have a 10-15 year life span
- Capital expenditure on macadam resurface works is avoided if levels are satisfactory
- Enhanced drainage capabilities for all weather use
- Improvement on pace can be achieved by addition of more infill

Smash Court Artificial Clay

SmashCourt® offers ITF category 2, medium - slow pace.
The SmashCourt® is a sand filled artificial clay tennis surface.

Advantages

- Identical playing characteristics to clay surfaces
- An unbound surface resulting in less muscle stress
- A low maintenance system with an extreme weather resistant and permeable surface
- A consistent year round playing surface
- Line markings included within the system
- Comes with a 10 year warranty

Equipment & Accessories

Sports Maintenance Services offer a full maintenance service. However, should you wish to undertake some aspects of maintenance yourself, we can offer the following items. Please contact our London office **0208 788 0123** to place an order.

- Grooming Rubber Drag Mat
- Mini Decompaction Unit
- Heavy Duty Drag Brushes

Our Accessories include:

- **Chemical cleaning agents and applicators** – used regularly they will alleviate moss/algae contamination.
- **Sports infill**- sand infill can be supplied per ton, bagged or loose.
- **Glue and tape** – for DIY repairs
- **Paint** – SAPCA approved acrylic and polyurethane premium extra textured paints for hard surfaces.
- **Tennis nets and posts**
