THE INSTALLATION DIVISION OF SPORTS MAINTENANCE SERVICES

INTRODUCTION

Sports Overlays supply and install a variety of synthetic surfaces suitable for a wide range of sports; tennis, netball, hockey and football.

Sports Overlays is the installation division of Sports Maintenance Services. Our experienced teams work throughout the UK and we have over 15 years experience in installation.

Sports Overlays can be fitted over suitable existing bases, such as macadam and stone, providing a cost effective solution for refurbishment and renovation. They are quick to install, highly durable and easy to maintain.

All Sports Overlays are European manufactured and conform to established sports governing body standards. All overlays have guarantees based on levels of maintenance and use.

Sports Overlays offer quality systems, expertise in installation and a dedicated client focused customer service. Our site surveyors are happy to advise on the range of systems and guide you as to the best solution for your requirements.

"Sports Overlays proved to be an excellent choice for the installation of our porous acrylic courts. The initial meetings were thorough. The preparatory work was very professional with members noting the time they spent readying the surface. The installation was smooth and conducted with great diligence by their Project Manager. The painting of the surface and most importantly the lines was managed with precision.

Steve Tiddy, Sutton Tennis and Squash Club

PKK / CUSHION SYSTEM

TENNIS & NETBALL

Popular with tennis clubs and schools across Europe and the UK. PKK is a heavy duty cushioned matting system that has an acrylic textured coat finish. The matting is glued onto an existing base, normally macadam or concrete. It can be used indoors and outdoors. PKK gives a faster more competitive game and is classed as an ITF category 4 medium – fast pace play.

The PKK product not only offers the end users excellent slip resistance and grip under foot, but also gives more energy back to the body through the patented acrylic matting. The PKK surface is excellent for all standard of players from Juniors to Seniors and allows a mixed paced game that will suit all levels of player.

- European (Dutch) manufactured system
- The PKK offers fast and reliable drainage, keeping courts active all year round
- Life expectancy 12-15 years
- Play characteristics consistent/stable over time
- The acrylic finish can be upgraded to achieve netball standards, making it a multi-use surface
- It offers a superior playing surface/upgrade for end users
- Avoids re-surfacing costs linked to installing a new macadam base
- Quality assurance - Key Stage Testing undertaken on installation

We offer an in-built maintenance package and annual testing programme on PKK installations.

Recent installations include: Sutton Tennis Club, Harrow School, Hereford Tennis Club.

EASY CLAY / CUSHION SYSTEM

DEDICATED TENNIS

Easy Clay is an open cushioned matting system with a pure rubber infill (EPDM). It is texturised and has a more open meshing system than the PKK. Once layed, the surface is given a single coat of heavy duty textured paint. It is then top dressed with pure (EPDM) rubber, 4 kg per metre square.

Play Characteristics - slower than the PKK, Easy Clay offers less traction but offers more slide for players. Complies with an ITF category 3 – medium pace.

- European (Dutch) manufactured system
- Easy Clay offers fast and reliable drainage, keeping courts active all year round
- Life expectancy 12-15 years
- Play characteristics consistent/stable over time
- It offers a superior playing surface/upgrade for end users
- Avoids re-surfacing costs linked to installing a new macadam base
- Quality assurance - Key Stage Testing undertaken on installation

We offer an in-built maintenance package and annual testing programme on our Easy Clay installations.

Recent case study includes Townsend Tennis Club 2018.

"We are very pleased to have the surface installed ... it is playing very well."

INSTALLATIONS

TESTING

SMASH COURT / CARPET SYSTEM

DEDICATED TENNIS

Smash Court is a sand filled artificial carpet. It offers a medium-slow paced game and is ideal for clubs. It complies with ITF Category 2 and it is an exceptionally low maintenance system, benefiting from consistent play characteristics over time. It is extremely weather resistant so offers all year round playing. Line markings are included within the system.

Infill options are: Belgium red sand or a Garsides burnt sand.

Carpet pile height is 15mm. Inlaid lines are slightly raised 2mm proud of the red synthetic turf.

- European (Dutch) manufactured system
- Smash Court offers fast and reliable drainage, keeping courts active all year round
- Life expectancy 12-15 years
- Play characteristics consistent/stable over time
- It offers a superior playing surface/upgrade for end users
- Avoids re-surfacing costs linked to installing a new macadam base
- Quality assurance - Key Stage Testing undertaken on installation

We offer an in-built maintenance package and annual testing programme on our smash court installations.

1. Infill

The Smash court infill is made of burnt silica infill that gives a red ceramic finish and is non absorbent and frost proof.

2. Synthetic carpet

The synthetic carpet is a special latest generation red artificial turf 12-15mm. The line marking, which consists of white, monofilament artificial turf fibres, is permanently bonded/ inlaid and the white inlaid lines are 2mm proud of the red synthetic turf.

3. Substructure

The substructure consists of an engineered base with a standard 6mm porous macadam aggregate at a minimum depth of 30mm.

TENNIS MATCH / CARPET SYSTEM

MULTI-USE

A surface suitable for tennis and netball. Tennis Match is a sand dressed carpet system. It has a pile height 15mm. Tennis Match is an exceptionally low maintenance system, benefiting from consistent play characteristics over time. Tennis Match can be quickly rolled over an existing macadam base.

Play characteristics - it is a surface that will get faster over time as the carpet wears and as infills compact, speeding up the game. It complies with ITF Category 3. The product also complies with the Federation of Netball product specifications.

- European (Dutch) manufactured system
- Tennis Match offers fast and reliable drainage, keeping courts active all year round
- Life expectancy 12-15 years
- It offers a superior playing surface/upgrade for end users
- Avoids re-surfacing costs linked to installing a new macadam base
- Quality assurance - Key Stage Testing undertaken on installation

We offer an in-built maintenance package and annual testing programme on our tennis match installations.

HOCKEY MATCH / CARPET SYSTEM

MULTI-USE

A surface suitable for hockey / multi-use. Hockey Match is a sand dressed carpet system. It has a pile height of 22mm. It is an exceptionally low maintenance system, benefiting from consistent play characteristics over time.

Hockey Match can be quickly rolled over an existing macadam base, it will require an insitu shock pad, 10-15mm depth. It complies with governing body standards. Its principle use is for Hockey, though it can be used for 'recreational' tennis or football.

- European (Dutch) manufactured system
- Hockey Match offers fast and reliable drainage, keeping the pitch active all year round
- Life expectancy 12-15 years
- It offers a superior playing surface/upgrade for end users
- Quality assurance - Key Stage Testing undertaken on base, shock pad and playing surface

We offer an in-built maintenance package and annual testing programme on our hockey match installations.

DEDICATED HOCKEY

HOCKEY / FOOTBALL MULTI-USE

FOOTBALL MATCH / 3G CARPET

DEDICATED FOOTBALL

A surface suitable for Football only. Football Match is a rubber filled carpet system. It has a pile height 40mm. It is an exceptionally low maintenance system, benefiting from consistent play characteristics over time. It complies with FIFA/FA product requirements.

Football Match can be overlayed onto an existing engineered or dynamic base with the required 10-15mm shock pad, either in situ or preformed.

- European (Dutch) manufactured system
- Football Match offers fast and reliable drainage, keeping the pitch active all year round
- Can also be used for 'recreational' 7 a side and 5 a side football
- Life expectancy 12-15 years
- It offers a superior playing surface/upgrade for end users
- Quality assurance - Key Stage Testing undertaken on base, shock pad and playing surface

We offer an in-built maintenance package and annual testing programme on our football match installations.

Recent case study includes Chelsea training ground, Cobham and Wandsworth Council / Furzedown.

INSTALLATION

RECLAMATION & RE-USE

XTRACTION PROCESS

Synthetic surfaces that are nearing the end of their life need to be disposed of in an ethical and environmentally responsible manner. Current practices do not recognise any existing value in the carpet or the infill at the end of the surface's life, as such all current surfaces are land filled.

The Xtraction process reclaims infill and carpet allowing for relocation, re-use and recycling either at another area on site, a sister school, other local institution or a community project. The Xtraction machinery, originating from America has been specifically developed for the recycling of synthetic carpets and infills, giving you the option to:

- Re-use the infills and the grass carpet on site.
- Reposition the synthetic carpet.
- Relocate the synthetic carpet.

Visit www.xtraction.com to learn more about this environmentally friendly process

FENCING SOLUTIONS

Sports Overlays offer a variety of fencing solutions for all budgets.

- Chainlink Fencing. Ideal for ball retention for tennis, netball and basket ball.
- Weldmesh. Secure fencing around pitches. Guarantees the safety of spectators and participants.
- Pitch Dividing Netting. Allows full sized sports pitches to be subdivided into smaller areas. Nets are fully retractable when not in use, enabling full pitch play.
- Spectator Railing
- Bespoke Fencing

EQUIPMENT / ACCESSORIES

We offer the following items.

- **Quad Bikes.** Ideal for towing our accessory drag mat and drag brush.
- **Mini Decompaction Unit.** Portable unit with weight bars. Fully adjustable to pile depths of 30mm.
- **Rubber Drag Mat.** Levels infill over slightly uneven playing surfaces and should be used in conjunction with the heavy duty drag brush.
- **Heavy Duty Drag Brushes.** Essential investment for synthetic sports surfaces. Regular use maintains playing qualities in terms of traction, speed and consistency of play. The brush controls debris levels and aerates the surface infill.
- **Sports Infill.** Rubber and sand infill can be supplied per tonne bagged or loose.
- **PDV (Pure Dry Vacuum Salt).** Agent for defrosting pitches.
- **Glue and Tape.** For DIY repairs to seams and inlaid lines. Glue supplied in 5 or 10 litre containers with a binder component.
- **Paint.** SAPCA approved acrylic and polyurethane premium extra textured paints for hard surface courts and MUGAs
- **Accessories.** A range of pitch accessories and equipment: football netting, corner flags and goal posts.
- **Chemical Cleaning Agents**

Quad and Rubber Drag Mat
